ICE EXPANDS LEADING MARKET PRICE VALIDATION SERVICE

Released : 06 June 2007

ATLANTA, June 6/PRNewswire-FirstCall/ -- IntercontinentalExchange, Inc. (NYSE: ICE), the leading electronic energy marketplace and soft commodity exchange, announced the recent expansion of its ICE Data Market Price Validation (MPV) service to include more products and data points. The ICE Data MPV service provides benchmarking and validation of "non-observable" market prices for long-dated OTC swaps, options and exotic derivative products, ranging from five to twenty years. During the May 2007 month-end valuation, the MPV service saw record participation from 34 of the world's leading commodity and energy trading firms including investment banks, utilities and hedge funds.

In response to the increasing demand for independent verification of portfolio valuations, ICE Data recently enhanced the monthly MPV service by adding a twice-monthly valuation service and by expanding coverage to include an extensive list of swaptions, crack and spark spread options. ICE Data MPV participant companies submit their forward curve and option prices on a monthly basis for over 200 widely held global contracts such as natural gas, crude oil and refined oil products, electric power, ethanol, corn, sugar, base and precious metals, freight, natural gas liquids and commodity index contracts. ICE Data then follows an audit process and averages these submissions to create consensus forward curves and option values that are provided to MPV participants. Participants then use these consensus forward curve and option values to verify internal valuations and mark their month-end portfolios in accordance with FASB and IAS recommendations with respect to the treatment and valuation of derivatives.

"The ICE Data MPV service helps our global subscriber base fulfill critical risk management requirements by providing independent, external validation of market prices, where traditionally, companies had to rely on stand-alone, independent pricing models that can result in a material mispricing of a portfolio," said Martin Wadhwani, Managing Director of ICE Data. "The pricing of complex derivatives can be challenging, especially for products where inherent volatility can result in rapid changes in value at risk, or in niche markets with limited liquidity or access to independent valuations. In response to customer demand, we are continuing to add new features to this vital tool for monitoring risk and valuing derivative portfolios."

About IntercontinentalExchange

IntercontinentalExchange(R) (NYSE: ICE) operates the leading global, electronic marketplace for trading both futures and OTC energy contracts and the leading soft commodity exchange. ICE's markets offer access to a range of contracts based on crude oil and refined products, natural gas, power and emissions, as well as agricultural commodities including cocoa, coffee, cotton, ethanol, orange juice, wood pulp and sugar, in addition to currency and index futures and options. ICE(R) conducts its energy futures markets through its U.K. regulated London-based subsidiary, ICE Futures, Europe's leading energy exchange. ICE Futures offers liquid markets in the world's leading oil benchmarks, Brent Crude futures and West Texas Intermediate (WTI) Crude futures, trading nearly half of the world's global crude futures by volume of commodity traded. ICE conducts its agricultural commodity futures and options markets through its U.S. regulated subsidiary, the New York Board of Trade(R). For more than a century, the NYBOT(R) has provided global markets for food, fiber and financial products. ICE was added to the Russell 1000(R) Index on June 30, 2006. Headquartered in Atlanta, ICE also has offices in Calgary, Chicago, Houston, London, New York and Singapore. For more information, please visit **www.theice.com** and **www.nybot.com**.
