

Commit yourself every day to our

7 QHSE PRIORITIES

Every person on every Rowan rig and shore-based facility should be familiar with our seven Quality, Health, Safety and Environmental Priorities.

The safety of personnel is our first and highest priority. There is no job so urgent or important that we cannot take the time to plan it well and do it safely.

You have an obligation and the authority to stop any activity if you believe it is not safe. Anyone who exercises STOP Work Authority in good faith should be commended and never reprimanded for stopping a job.

We will do what's right. We will comply with all applicable laws and regulations.

Our operations will not harm the environment. Each facility will have a plan to prevent pollution and manage any incident to minimize impact to the environment.

We will perform risk assessments to ensure the safety of our personnel, the environment and our assets. We will either eliminate any hazards or plan our business to manage risks using appropriate mitigation methods.

We will continuously improve our operations in order to protect the health and safety of personnel, safeguard the environment and improve our service quality.

The Rowan Management System (RMS) is how we conduct our business. We shall abide by what is written in our policies and follow our procedures to capture "best practice." All rigs will utilize Rig Specific Operating Procedures to perform key operations (according to RMS-DOP-600).

If you identify a better way to perform a job, utilize a Management System Improvement Request (MSIR) so our procedures may be improved to reflect best work practices.
