Axalta Introduces Latest Addition to Internal Pipe Coatings Portfolio

9/11/2017

HOUSTON--(BUSINESS WIRE)-- Axalta Coating Systems (NYSE: AXTA) is pleased to introduce its latest addition to the corrosion resistant internal pipe coatings line from the Nap-Gard® Functional Coatings collection. Nap-Gard 7-0015 Tan Internal FBE is a thermosetting epoxy powder designed to pass the Saudi Aramco 09-SAMSS-091 (2011) specification.

“Axalta is excited to bring an additional product to its internal

pipe coatings line,” said Meghan Hodge, Axalta Global Product Marketing Manager, Functional Coatings. “Nap-Gard 7-0015 will be a good option for customers who need a flexible coating that provides corrosion protection in severe downhole environments up to 105°C (221°F).”

Today's environments explored by oil and gas operators have higher temperatures and concentrations of H₂S, CO₂ and other gas contaminants. These conditions require the use of significantly more expensive metal chrome alloys to avoid corrosion and failure. Axalta's new generation of pipe coatings provide a cost-effective alternative to protecting the internal diameter of pipelines. Nap-Gard 7-0015 delivers high adhesion properties to effectively protect pipelines subject to H₂S, CO₂ and CH₄ exposure.

Axalta's Nap-Gard powder coatings are formulated for use on external and internal oil, gas and water pipelines with single, dual and multi-layer application options. Nap-Gard also provides corrosion protection solutions for valves, fittings and rebar. Axalta's functional coatings offer innovative solutions for today's epoxy-based coating applications and are designed to provide superior corrosion protection for substrates in harsh, demanding environments.
