Southern Power, a subsidiary of Southern Company, is a leading U.S. wholesale energy provider meeting the electricity needs of municipalities, electric cooperatives, investor-owned utilities and other energy customers. Southern Power and its subsidiaries own or have the right to own 46 facilities operating or under construction in ten states with more than 12,600 MW of generating capacity in Alabama, California, Florida, Georgia, Maine, Minnesota, Nevada, New Mexico, North Carolina, Oklahoma and Texas.

Atlanta-based Southern Company is America’s premier energy company, serving 9 million customers through its subsidiaries with clean, safe, reliable and affordable energy. With electric utilities in four states, natural gas distribution utilities in seven states, a competitive generation company serving wholesale customers across the country and a nationally recognized provider of customized energy solutions, as well as fiber optics and wireless communications, Southern Company and its subsidiaries are inventing America’s energy future.

The electricity and associated renewable energy credits generated by the facility are sold under a 20-year power purchase agreement with Southern California Edison Company.

**Location**
San Bernadino County, California

**Capacity**
300 MW

**Fuel Resource**
Photovoltaic Solar

**Ownership**
Southern Power
First Solar

**Size**
The facility is located on 1,685 acres in San Bernadino County, California.

**Technology**
The project consists of approximately 3.2 million of First Solar’s thin-film photovoltaic (PV) solar modules mounted on fixed-tilt ground-mounted tables.

PV modules generate electricity directly from sunlight through an electronic process that occurs naturally in certain types of material known as semiconductors. Solar energy frees electrons in these materials to travel through an electrical circuit, powering devices or sending electricity to the grid.
