

ICE Launches the ESG Geo-Analyzer for Property-Level Climate Risk and Demographic Data

Analyze portfolios of commercial and residential properties, as well as Asset-backed securities and corporate operations tied to those locations

ATLANTA and NEW YORK -- July 19, 2022 -- Intercontinental Exchange, Inc. (NYSE: ICE), a leading global provider of data, technology and market infrastructure, today announced the launch of the ICE ESG Geo-Analyzer, which leverages ICE's geospatial data modelling to provide climate risk and social impact data and analytics for properties and communities throughout the U.S.

The ICE ESG Geo-Analyzer is an on-demand platform that takes user-provided location data including street address, latitude / longitude, or zip code to analyze the climate risk and social impact characteristics surrounding any location or portfolio of properties, within the contiguous U.S. It can be used to analyze commercial and residential properties, whole loan portfolios and real estate holdings, and the asset-backed securities or business and corporate operations tied to those locations. The ICE ESG Geo-Analyzer will cover additional geographies globally in 2023.

"Physical climate risk poses a growing challenge for property owners, investors and corporations," said Elizabeth King, President of Sustainable Finance and Chief Regulatory Officer at ICE. "The ESG Geo-Analyzer provides innovative climate risk metrics on multiple types of hazards, including wildfires, hurricanes, droughts and floods, as well as social impact data on community demographics and affluence, plus over 100 other fields. This data can provide more transparency into a property or group of properties to help inform risk assessments and decision-making."

ICE ESG Geo-Analyzer is part of ICE's growing global portfolio of sustainable finance offerings, which includes a corporate ESG database of over 10,000 companies, U.S. municipal bond and MBS climate risk services, a suite of global corporate climate indices and the world's leading environmental marketplace where an estimated \$1 trillion in notional value equivalent of carbon allowances traded in 2021, equal to over half the world's estimated total annual energy-related emissions footprint.
