Sherritt Overview
Sherritt has a 90-year history of growth and innovation. This experience has enabled Sherritt to emerge as a world leader in the mining and refining of nickel and cobalt from lateritic ores and become Cuba’s largest foreign investor through its Moa Joint Venture and the country’s largest independent energy producer.

Having eliminated $2 billion in debt over the past four years, Sherritt is completing a transformation. With a strengthened balance sheet and as one of the world’s lowest-cost, highest purity producers of nickel and cobalt, Sherritt is well positioned to capitalize on the growing demand for battery metals needed for electric vehicles.

Sherritt’s Investment Highlights
- Low-cost producer of high purity nickel and cobalt.
- Well positioned to capitalize on electric vehicle battery demand.
- Upside leverage to improving nickel and cobalt prices.
- Energy assets add cash flow diversity.

**Why Nickel Deficit Supply is Looming**

- The emergence of electric vehicles is generating demand for Class 1 nickel, a key metal used in the manufacture of lithium-ion batteries.
- Higher cobalt prices and limited available supply are driving battery makers to reduce their reliance on cobalt and turn to nickel.
