Sherritt Overview

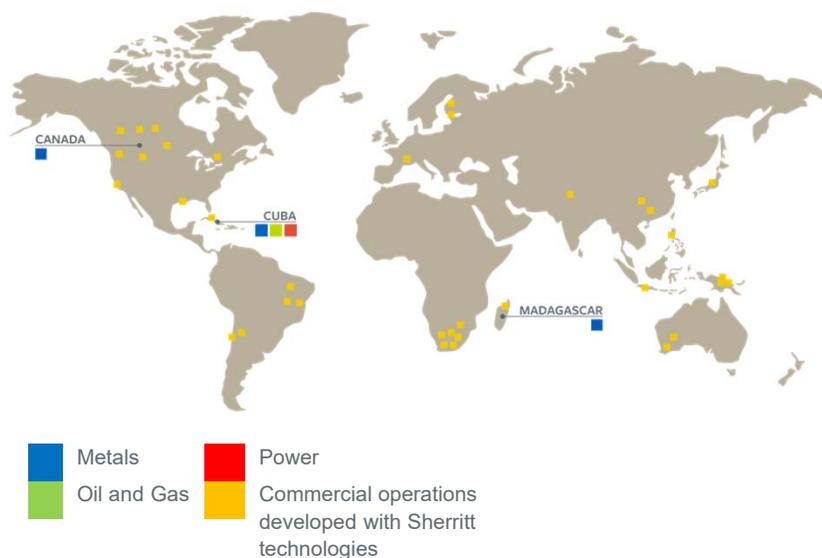

Sherritt has a 90-year history of growth and innovation. This experience has enabled Sherritt to emerge as a world leader in the mining and refining of nickel and cobalt from lateritic ores and become Cuba's largest foreign investor through its Moa Joint Venture and as the country's largest independent energy producer.

As a producer of the highest purity nickel and cobalt and a continued focus on improving production efficiencies at its Moa JV, Sherritt is well positioned to capitalize on the growing demand for battery metals needed for electric vehicles.

Sherritt's Investment Highlights

- Low-cost producer of high purity nickel and cobalt.
- Leader in mining and hydrometallurgical refining of nickel and cobalt from lateritic ores.
- Well positioned to capitalize on electric vehicle battery demand.
- Upside leverage to improving nickel and cobalt prices.
- Energy assets add cash flow diversity.

Why Nickel Supply Deficit is Looming

- The emergence of electric vehicles is generating demand for Class 1 nickel, a key metal used in the manufacture of lithium-ion batteries.
- Limited available supply is driving battery makers to reduce their reliance on cobalt and turn to nickel in evolving battery metal content.

- Sherritt produces Class 1 nickel, a high purity form of nickel with limited supply and growing demand around the world.
