

Quest Diagnostics and Withings Announce Availability of Integrated WiFi Weight Tracking for the Gazelle Mobile Health Platform

February 10, 2011

MADISON, N.J., Feb. 10, 2011 /PRNewswire via COMTEX/ -- Quest Diagnostics and Withings announced that the Withings WiFi Body Scale, the world's first WiFi connected personal weight scale, can now automatically import body weight data directly into Gazelle(TM), the secure mobile health platform from Quest Diagnostics. With Gazelle, users can electronically receive their Quest Diagnostics laboratory results and manage their personal health information directly from their Apple(R) iPhone, BlackBerry(R), and soon, Google Android(R), smartphones.

The WiFi Body Scale automatically records the user's body weight and body mass index (BMI) and transmits the information to a secure webpage or to WiScale, Withings free iPhone application. The scale can track up to eight users and each user has the ability to designate where they want their weight information to go when they step on the scale. Also, if enabled by the user, the scale can automatically "Tweet" their information for feedback and motivation. For more information about Withings, go to <http://www.withings.com/>.

"We're pleased to bring to Gazelle the advanced capabilities of the Withings WiFi Body Scale, which helps patients better understand and manage their health by wirelessly tracking their weight and delivering their personal data into Gazelle," said Neil Desai, Gazelle Product Manager at Quest Diagnostics. "Over the coming months, we will continue to add additional capabilities from best-in-class partners as we expand and enhance the Gazelle Mobile Health platform."

Introduced in October of 2010, Gazelle allows users to see, store and share their vital health information with ease and security while on the go. For example, Gazelle allows a patient to receive their Quest Diagnostics lab results directly on their smartphone and, if they choose, conveniently share the results by e-mail or fax with their doctors and other health care providers. More information about Gazelle's features are available at <http://www.mygazelleapp.com/>.

About Quest Diagnostics:

Quest Diagnostics Incorporated (NYSE: DGX) is the world's leading provider of diagnostic testing, information and services that patients and doctors need to make better healthcare decisions. The company offers the broadest access to diagnostic testing services through its network of laboratories and patient service centers, and provides interpretive consultation through its extensive medical and scientific staff. Quest Diagnostics is a pioneer in developing innovative new diagnostic tests and advanced healthcare information technology solutions that help improve patient care. Additional company information is available at: <http://www.questdiagnostics.com/>.

About Withings:

Withings is a French start-up established by three executives from the technology and telecom industry. With a focus on the innovation and design for everyday products, Withings has introduced three products since its inception in 2009--the World's first WiFi Body Scale, the Withings Blood Pressure Monitor and the Smart Baby Monitor. For more information, visit <http://www.withings.com/>.
