Cautionary Statement on Forward-Looking Information

All statements, other than statements of historical fact, contained or incorporated by reference in or made in giving this presentation and responses to questions, including but not limited to any information as to the future performance of Kinross, constitute “forward looking statements” within the meaning of applicable securities laws, including the provisions of the Securities Act (Ontario) and the provisions for “safe harbor” under the United States Private Securities Litigation Reform Act of 1995 and are based on expectations, estimates and projections as of the date of this presentation. Forward-looking statements contained in this presentation include, without limitation, statements with respect to: the identification of future mineral resources at our projects; the schedules for the Company’s development projects including the Tasiast 24K and the ramp up of operations at La Coipa; the declaration, payment and sustainability of the Company’s dividends or share repurchases; our guidance for production, production costs of sales, cash flow, free cash flow, all-in sustaining cost of sales, and capital expenditures; future production growth; throughput rates at the Company’s operations; the future performance of the Company’s common share trading price; the future of the Company’s liquidity, balance sheet and credit ratings; greenhouse gas reduction initiatives and targets; the implementation and effectiveness of the Company’s ESG strategy; as well as references to other possible events, the future price of gold and silver, the timing and amount of estimated future production, costs of production, operating costs; capital expenditures, costs and timing of the development of projects and new deposits, estimates and the realization of such estimates (such as mineral or gold reserves and resources or mine life), success of exploration programs, development and mining, currency fluctuations, capital requirements, project studies, government regulation, permit applications, restarting suspended or disrupted operations, environmental risks and legal proceedings, and resolution of pending litigation. The words “expect”, “project”, “estimate”, “anticipate”, “believe”, “intend”, “plan”, “predict”, “target”, “endeavour”, “potential” or “subject to” or any similar terms, are used to identify forward-looking statements. Forward-looking statements are necessary based upon a number of estimates and assumptions that, while considered reasonable by Kinross as of the date of such statements, are inherently subject to significant business, economic, legislative and competitive risks and uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: the inaccuracy of any of the foregoing assumptions, restrictions or penalties now or subsequently imposed, other actions taken, by, against, in respect of or otherwise impacting any jurisdiction in which the Company is domiciled or operates (including but not limited to Canada, the European Union and the United States), or any government or citizens of, persons or companies domiciled in, or the Company’s business, operations or other activities in, any such jurisdiction; fluctuations in the currency markets; fluctuations in the spot and forward price of gold or certain other commodities (such as fuel and electricity); price inflation of goods and services; changes in the discount rates applied to calculate the present value of net future cash flows based on country-specific real weighted average cost of capital; changes in the market valuations of peer group gold producers and the Company, and the resulting impact on market price to net asset value multiples; changes in various market variables, such as interest rates, foreign exchange rates, gold or silver prices and lease rates, or global fuel prices, that could impact the mark-to-market value of outstanding derivative instruments and ongoing payments/receipts under any financial obligations; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); changes in national and local government legislation, taxation (including but not limited to income tax, advance income tax, stamp tax, withholding tax, capital tax, tariffs, value-added or sales tax, capital outflow tax, capital gains tax, windfall or windfall profits tax, production royalties, excise tax, customs/import or export taxes/duties, tax assets, transfer asset tax, property use or other real estate tax, together with any related fine, penalty, surcharge, or interest imposed in connection with such taxes), controls, policies and regulations; the security of personnel and assets; political or economic developments in Canada, the United States, Chile, Brazil, Russia, Mauritania, or other countries in which Kinross does business or may carry on business; business opportunities that may be presented to, or pursued by, us; our ability to successfully integrate acquisitions and complete divestitures; operating or technical difficulties in connection with mining, development or refining activities; employee relations; litigation or other claims against, or regulatory investigations and/or any enforcement actions, administrative orders or sanctions in respect of the Company (and/or its directors, officers, or employees) including, but not limited to, securities class action litigation in Canada and/or the United States, environmental litigation or regulatory proceedings or any investigations, enforcement actions and/or sanctions under any applicable anti-corruption, international sanctions and/or anti-money laundering laws and regulations in Canada, the United States or any other applicable jurisdiction; the speculative nature of gold exploration and development including, but not limited to, the risks of obtaining necessary licenses and permits; diminishing quantities or grades of reserves; adverse changes in our credit ratings; and contests over title to properties, particularly title to undeveloped properties. In addition, there are risks and hazards associated with the business of gold exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion losses (and the risk of inadequate insurance, or the inability to obtain insurance, to cover these risks). Many of these uncertainties and contingencies can directly or indirectly affect, and could cause, Kinross’ actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, Kinross, including but not limited to resulting in an impairment charge on goodwill and/or assets. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Forward-looking statements are provided for the purpose of providing information about management’s expectations and plans relating to the future. The estimates, models and assumptions of Kinross referenced, contained or incorporated by reference in this presentation, which may prove to be incorrect, include, but are not limited to, the various assumptions set forth herein and in our Management’s Discussion and Analysis (“MD&A”) for the period ended March 31, 2023, the Annual Information Form dated March 31, 2023 and the “Cautionary Statement on Forward-Looking Information” in our news release dated May 9, 2023, to which readers are referred and which are incorporated by reference in this presentation, all of which qualify any and all forward-looking statements made in this presentation. These factors are not intended to represent a complete list of the factors that could affect Kinross. Kinross disclaims any intention or obligation to update or revise any forward-looking statements or to explain any material difference between subsequent actual events and such forward-looking statements, except to the extent required by applicable law.

Other information

Where we say "we", "us", "our", the "Company", or "Kinross" in this presentation, we mean Kinross Gold Corporation and/or one or more or all of its subsidiaries, as may be applicable.

All dollar amounts are expressed in U.S. dollars, unless otherwise noted.

The technical information about the Company’s mineral properties contained in this presentation has been prepared under the supervision of Mr. John Sims who is a “qualified person” within the meaning of National Instrument 43-101.

Kinross Gold Corporation

Who is Kinross?

LARGE GOLD PRODUCER, HIGHLY LIQUID
- ~US$6.5 billion market capitalization(1)
- +US$100 million of trading liquidity per day(2)

AMERICAS FOCUSED
- 6 mines

GEOGRAPHICALLY DIVERSIFIED PRODUCER
- Americas accounts for ~70% of total production; 50% of production from 2 top tier assets(3)

STRONG PRODUCTION OUTLOOK
- Portfolio of mines producing +2Moz/year
- Plus a World Class Development Project

STABLE PRODUCTION +2MOZ
- Attractive dividend yield and dynamic share buyback program
- Investment grade balance sheet

DYNAMIC CAPITAL ALLOCATION

COMMITTED TO RESPONSIBLE MINING
- Consistent leader in ESG performance by key rating agencies
- Committed to 30% reduction in GHG intensity by 2030

(1) As of May 10th, 2023
(2) Source: Bloomberg, last 30 days
(3) Top tier defined as assets with Life of Mine (LOM) into the next decade and annual production averaging greater than 500k oz and AISC < $1000/oz
High Quality Portfolio of Assets
Two top tier\(^{(1)}\) mines account for ~50% of production

2023E Gold Equivalent Production\(^{(2)}\)

- ~2.1M ounces
- 71% Americas
- 29% West Africa

Approximate Annual Production (koz.)\(^{(1, 3)}\)

- < 300
- 300–400
- > 500, Top Tier

- Fort Knox, U.S.A.
- Manh Choh, U.S.A.
- Bald Mountain, U.S.A.
- Great Bear, Canada
- Head Office, Canada
- Round Mountain, U.S.A.
- Tasiast, Mauritania
- Paracatu, Brazil
- La Coipa, Chile
- Lobo-Marte, Chile

(1) Top tier defined as assets with Life of Mine (LOM) into the next decade and annual production averaging greater than 500k oz and LOM AISC <$1000/oz

Balance Sheet & Financial Flexibility

Liquidity Position\(^{(1)}\)

As at March 31\(^{st}\), 2023

\textbf{$1.7B$}

\begin{itemize}
  \item Cash & cash equivalents
  \item Available credit\(^{(1)}\)
\end{itemize}

Financial Flexibility

\begin{itemize}
  \item Total liquidity\(^{(1)}\) of ~\textbf{$1.7$ billion}, including \textbf{$471$ million} of cash and cash equivalents
  \item \textbf{Net debt to EBITDA improved} as of quarter end, with expectation of further reduction by end of 2023 at current gold prices
  \item \textbf{Investment grade credit ratings} from three major agencies
\end{itemize}

---

\(^{(1)}\) "Liquidity Position" and "Total liquidity" are defined as the sum of cash and cash equivalents, as reported on the interim condensed consolidated balance sheets, and available credit under the Company’s credit facilities (as calculated in Section 6 - Liquidity and Capital Resources of Kinross’ MD&A for the period ended March 31, 2023).
Manageable Debt Profile

Senior notes are rated investment grade by all three rating agencies

## Disciplined Capital Allocation Strategy

### Reinvesting in our Business

<table>
<thead>
<tr>
<th>Description</th>
<th>2023 Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Sustaining Capex</strong> – maintaining our existing operations safely and to world-class environmental standards</td>
<td>~$510M(1)</td>
</tr>
<tr>
<td><strong>Expansion Projects</strong> – pursuing attractive returns by leveraging existing infrastructure and experience in operating jurisdictions, to minimize execution risk</td>
<td>~$490M(1)</td>
</tr>
<tr>
<td><strong>Targeted Exploration</strong> – capitalizing on opportunities to extend or grow production</td>
<td>~$150M</td>
</tr>
</tbody>
</table>

### Returning Capital to Shareholders

- Sustainable quarterly dividend
- Enhanced share buyback program

Through ~$150M dividends + dynamic share buyback program

### Maintaining Financial Strength

- In strong financial position with investment grade credit ratings

---

(1) See Capital Expenditure Guidance table in Appendix.
Capital Return Program

Returning capital to shareholders while protecting investment grade balance sheet

Compelling capital deployment opportunity to enhance per-share metrics and shareholder returns

Dividend remains in place

We returned $37 million dollars to shareholders through our quarterly dividend distribution in Q1

Buyback Framework protects investment grade balance sheet and capacity to invest in the business

Buyback Approach:
75% of Excess Cash Flow
(Free Cash Flow – Interest – Dividends)

- Buybacks paid out of excess cash flow, and only if net leverage below 1.7x(1)
- Buybacks paused if:
  - credit ratings impacted
  - major operational disruption occurs
  - gold price drops significantly

(1) Represents last twelve months net leverage ratio
**Advancing the Project Pipeline**

**Expected project milestones on track\(^{(1)}\)**

1. Extensions Along Strike
2. Red Lake Style Mineralization
3. Zones Parallel to LP Fault

Great Bear property

Transportation network:
- Transmission line
- Highway 105

Geological features:
- Felsic – Intermediate
- Felsic Intrusive
- Ultramafic
- Mafic-Ultramafic
- Mafic (Calc-Alkaline?)
- Sediments

3 km
Targeted Path to Production at Great Bear

Expected start of early works in early 2027 or late 2026, if permits received quickly

- ‘23: Project Studies
- ‘24: Exploration Decline
- ‘25: Environmental Baseline
- ‘26: Prepare Impact Statement
- ‘27: Agency Impact Statement Review
- ‘28: Initial Permits
- ‘29: Final Permits

Permitting estimate in line with peers1 for federal IAAC1 process

1IAAC = Impact Assessment Agency of Canada, which was implemented in 2019. Average timelines consider Upper Beaver, Wasamac and Troilus. Permitting timelines are estimated and subject to Government process, consultation and engagement.
Asset Highlights
Q1/23 Recap

Q1 On Plan
• All assets remain on track
• Q1 production accounted for ~22% of full-year guidance

La Coipa
• Record grades and recoveries
• Generated strong cash flow
• Production remains on track to achieve full-year guidance

Tasiast
• Record January and March production
• Progressing 24K project

Great Bear
• Continuing to intersect high-grade mineralization at depth
• Technical studies and permitting activities progressing well
Tasiast Ramp-Up Progressing

On Track to Meet FY2023 Guidance

• Strong Q1 production, with record monthly production of ~55koz achieved in both January and March

• Successfully completed planned shutdown in February

• 24k project remains on schedule to reach throughput of 24ktpd by mid-2023, followed by a ramp-up to sustained throughput levels

• On track to meet FY2023 production guidance of ~610koz
Tasiast Solar Project

Advancing on Schedule for Completion by end of 2023

• The 34 MW solar power plant with 18 MW battery system will provide ~20% of the site’s power, offsetting ~530 kt of greenhouse gas emissions over the life-of-mine, which represents ~3% of Kinross’ emissions on an annual basis

• Civil works are well advanced and mechanical assembly installation is progressing well

• Installation of first photovoltaic modules commenced in April
La Coipa

High-Margin Production

• Q1 production of 54k oz at a cash cost of $727/oz\(^{(1)}\)

• Achieved record grades and recoveries

• Performance is expected to improve throughout the year

• On track for ~240k oz in 2023

• Generating strong cash flow

(1) Cash cost/oz is defined as production cost of sales divided by total gold equivalent ounces
Paracatu
Solid Contributor

- Q1 production of 123kozs
- Year-over-year improvements to minimize impacts of the rainy season
- Higher production expected in Q2 and Q3 on higher mining rates and higher grades in deeper areas of the pit in the southwest
Round Mountain

Maintaining open pit optionality while exploring underground opportunities

- Currently mining phases W1, W2 and other minor phases (shown in green)
- Progressing underground potential at Phase X (orange star) in 2026
  - Continuation of Phase W orebody; potential to exploit from UG at higher margin; driving exploration decline in 2023
- W4 (red) has been moved from reserve to resource; potential to partially exploit ore from underground
- Growth options being contemplated:
  - Phase S (blue) – Potential next open pit pushback to SouthEast
  - Phase W3 (yellow) – under study with future potential
  - Gold Hill Underground - Satellite deposit 8 km away

Potential Round Mountain Production Sequence

Round Mountain – Phase X

Focused on Higher-Margin UG Potential at Phase X

- Progressing decline to start definition drilling in early 2024
- Advancing studies and permitting in parallel to advance path to first production
- Vein intercepts and early mine designs confirming potential for high-productivity low-cost underground operation at Phase X given wide and consistent nature of mineralization: +10m wide mineralized zones at average grade of 3 to 4 g/t
Gold Hill

Potential High-Grade Underground Satellite to Supplement Phase X UG

- Drilling suggests a series of narrower, higher-grade parallel veins extending from the open pit
- Lower production, higher-grade underground satellite would supplement Phase X UG ore feed and benefit from synergies of combined operations
Manh Choh
Construction is progressing on schedule and on budget

- Site camp now operational, construction development activities on schedule and on budget; early works program successfully completed
- Public comment period for operating permits now closed overall permitting process on track
- Initial production on track to commence in second half of 2024

Kinross Alaska (100% Fort Knox and Gil and 70% Manh Choh)

| | ~400,000 Au eq. oz. |
|--------------------------|
| Average annual production (2024 - 2027) |
| Average grade processed (2024 - 2027) | 0.45 g/t |
| All-in sustaining cost\(^{(3)}\) (2024 - 2027) | $1,100 per Au eq. oz. |

---

(1) Reported at the Kinross-owned 70% basis. See Kinross Q2 2022 press release dated February 15th, 2022 for detailed Manh Choh Feasibility Study results.

(2) Includes pre-production G&A, capitalized waste stripping, pre-purchase of ore haul fleet. Attributable Basis 70% Manh Choh; 100% Fort Knox.

(3) All-in sustaining cost per equivalent ounce sold is a non-GAAP ratio with no standardized meaning under IFRS and therefore, may not be comparable to similar measures presented by other issuers. Refer to endnote #2
Kettle River – Curlew Project
Underground drilling ongoing

- A low sulfidation epithermal gold deposit in Washington, USA
  - Proximal to **major state highway**
  - 35km by paved road from 100% owned **Kettle River mill and tailings facility**
  - **Significant Regional Endowment**, historic production at Republic Mine ~2.5Moz and Kinross’ Buckhorn ~1.3Moz
- Underground exploration drift proving robustness of geological model and facilitating new discoveries:
  - Confirmed vein extensions and continuity across multiple targets, which are expected to add to the resource in 2023
  - Intersected **6m @ 20.2 g/t Au** in Stealth vein
  - High potential for additional strike & dip extension

K2 Mine
Curlew District 6.5 km²
Exploration Potential
Post-mineral cover <520m
Looking N20W
Partial unsliced section w/ 600m thick paleo/topo

K1 Mine
LP Stealth Galaxie

Kinross Gold Corporation
May 2023
# Global Mining Leader in ESG (1)

## Environment

**WATER MANAGEMENT**
- ~80% average water volume recycling rate over the past 5 years
- Renewable energy 63% of total electricity consumed (grid and self-generation)

**GHG INTENSITY**
- Zero reportable incidents at all active, inactive and closed tailings facilities

**TAILINGS MANAGEMENT**

## Social

- 99% of workforce hired from within host country
- > 600,000 beneficiaries of community investments
- $2 billion spent on goods and services in host countries
- $2.9 billion spent in host countries through taxes, wages, procurement & community investments

## Governance

### INDEPENDENT BOARD
- 9 of 10 Board members are independent
- All Board committees composed of 100% independent directors

### TOP TIER GOVERNANCE
- Top-ranked mining company in The Globe and Mail's annual corporate governance survey for past two years, placing 15th out of 226 companies in 2022

### DIVERSITY
- 40% of current board members meet one or more diversity characteristics
- Signatory to the BlackNorth Initiative
- One Board Director is a member of the Indigenous Peoples

---

(1) All statistics shown are 2022 figures excluding divested operations
(2) Data sourced from company filings for years 2017-2022; 2022 figures not yet available in full. Peers normally include: Agnico Eagle, AngloGold, Barrick, Gold Fields, Newcrest, Newmont, Harmony. In this analysis and based on sustainability reports released for 2022, Barrick, Agnico and Newcrest is included. For Benchmarking TRIFR, the following Gold Sector Peers were considered: Agnico Eagle, AngloGold, Barrick, Gold Fields, Newcrest and Newmont (5-year average for years 2018-2022).
(3) Total Reportable Injury Frequency Rate includes all employees and contractors per 200,000 hours worked
Endnotes

1) Kinross’ outlook represents forward-looking information and users are cautioned that actual results may vary. Please refer to the Cautionary Statement on Forward-Looking Information on slide 2 of this presentation.

2) All-in sustaining cost per equivalent ounce sold, sustaining capital expenditures and non-sustaining capital expenditures are non-GAAP financial measures and ratios, as applicable, with no standardized meaning under IFRS and therefore, may not be comparable to similar measures presented by other issuers. All-in sustaining cost per equivalent ounce sold for non-producing projects are forward-looking non-GAAP ratios without historical equivalents. All-in sustaining cost per equivalent ounce sold is calculated as all-in sustaining cost divided by gold equivalent ounces sold. All-in sustaining cost is a non-GAAP financial measure. For definitions, purpose and reconciliations of these non-GAAP financial measures and ratios, please refer to Section 11 - Supplemental Information of Kinross' MD&A for the year ended December 31st, 2022, which section is incorporated by reference herein and as filed on the Company's web site at www.kinross.com, on SEDAR at www.sedar.com and on EDGAR at www.sec.gov.

3) Capital expenditures from continuing operations” are as reported as “Additions to property, plant and equipment” as disclosed under IFRS on the consolidated statements of cash flows and includes 100% of capital expenditures for Manh Choh, of which 70% is Kinross’ share.

4) Ranking on ESG. Percentile ranking based on: (1) S&P. score 74; 93rd percentile (2) Sustainalytics. 15th out of 121 peers (ESG risk score 24.9) (3) MSCI. achieved an ‘A’ rating. 32% of peers rated AA or higher, 14% as A; assume KGC at midpoint. (4) ISS. achieved a C+ rating; of 187 peers, approximately 2% scored B, 6% B-, and 11% C+; assume KGC at midpoint of C+ (5) Moody’s score 57; 4th out of 51 in sector, equivalent to 92nd percentile (7) Refinitiv score A-; 80.26 out of 100. (8) G&M score 93 out of 100.

(5) These figures are non-GAAP financial measures and ratios, as applicable, and are defined and reconciled on pages 20 to 25 of the news release dated February 15th, 2023. Non-GAAP financial measures and ratios have no standardized meaning under IFRS and therefore, may not be comparable to similar measures presented by other issuers.

(6) Forecast 2023 sustaining, non-sustaining and total forecast capital expenditures are attributable and include Kinross’ share of Manh Choh (70%) capital expenditures. Actual results as reported for the year ended December 31, 2022, for sustaining, non-sustaining and total capital expenditures are on a total basis and include 100% of Manh Choh capital expenditures. Sustaining and non-sustaining capital expenditures are non-GAAP financial measures and are defined and reconciled on pages 24 and 25 of the news release dated February 15th, 2023.

(7) Canada’s forecast non-sustaining capital expenditures include approximately $40 million of study costs at the Great Bear project.
Material assumptions used to forecast 2023 production cost of sales are as follows:

- a gold price of $1,800 per ounce;
- a silver price of $20 per ounce;
- an oil price of $90 per barrel;
- foreign exchange rates of:
  - 5.0 Brazilian reais to the U.S. dollar;
  - 850 Chilean pesos to the U.S. dollar;
  - 35 Mauritanian ouguiyas to the U.S. dollar; and
  - 1.30 Canadian dollars to the U.S. dollar;

Taking into account existing currency and oil hedges:

- a 10% change in foreign currency exchange rates would be expected to result in an approximate $20 impact on production cost of sales per ounce;(8);
- specific to the Brazilian real, a 10% change in this exchange rate would be expected to result in an approximate $30 impact on Brazilian production cost of sales per ounce;
- specific to the Chilean peso, a 10% change in this exchange rate would be expected to result in an approximate $50 impact on Chilean production cost of sales per ounce;
- a $10 per barrel change in the price of oil would be expected to result in an approximate $3 impact on fuel consumption costs on production cost of sales per ounce; and
- a $100 change in the price of gold would be expected to result in an approximate $4 impact on production cost of sales per ounce as a result of a change in royalties.

2023 sustaining capital includes the following forecast spending estimates:

- Mine development: $155 million (United States); $25 million (Chile);
- Mobile equipment: $45 million (United States); $60 million (Brazil); $5 million (Chile); $15 million (Mauritania)
- Mill facilities: $5 million (United States); $40 million (Brazil); $5 million (Chile); $5 million (Mauritania)
- Leach facilities: $45 million (United States)
- Tailings facilities: $5 million (United States); $55 million (Brazil), $10 million (Mauritania)

2023 non-sustaining capital includes the following forecast spending estimates:

- Tasiast West Branch stripping: $165 million
- Manh Choh (70%):(9): $140 million
- Development and growth projects and studies: $60 million
- Great Bear studies:(10): $40 million
- ESG projects: $35 million

(8) Refers to all of the currencies in the countries where the Company has mining operations, fluctuating simultaneously by 10% in the same direction, either appreciating or depreciating, taking into consideration the impact of hedging and the weighting of each currency within our consolidated cost structure.
(9) Manh Choh non-sustaining capital at 100% is estimated to be approximately $180 million.
(10) Included in 2023 exploration guidance of $150 million are approximately $5 million of capitalized infill drilling costs related to the Great Bear project. These costs are also included in Great Bear’s approximately $40 million capital guidance.
MINERAL RESERVE AND MINERAL RESOURCE STATEMENT NOTES – Appendix B

(1) Unless otherwise noted, the Company's mineral resources are estimated based on a gold price of $1,700 per ounce. Open pit Mineral Resources are estimated at a cut-off grade of 0.5 g/t Au. The LP Zone pit shell was selected at an input gold price of US$1,400/oz (for volume); however, resources are reported based on a US$1,700/oz cut-off value. Underground Mineral Resources are estimated at a cut-off grade of 2.3 g/t Au for LP and Hinge and 2.5 g/t for Limb. The mineral resource estimates are reported in contained units based on Kinross’ interest and are estimated based on an exchange rate of one Canadian Dollar to US$ 1.30.

(2) The Company's mineral resource estimates as at December 31, 2022 are classified in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (“CIM”) “CIM Definition Standards For Mineral Resources and Mineral Reserves” adopted by the CIM Council (as amended, the “CIM Definition Standards”) in accordance with the requirements of National Instrument 43-101 “Standards of Disclosure for Mineral Projects” (“NI 43 101”). Mineral resource estimates reflect the Company's reasonable expectation that all necessary permits and approvals will be obtained and maintained.

(3) Cautionary note to U.S. investors concerning estimates of mineral reserves and mineral resources. These estimates have been prepared in accordance with the requirements of Canadian securities laws, which differ from the requirements of United States' securities laws. The terms “mineral reserve”, “proven mineral reserve”, “probable mineral reserve”, “mineral resource”, “measured mineral resource”, “indicated mineral resource” and “inferred mineral resource” are Canadian mining terms as defined in accordance with NI 43 101 and the CIM Definition Standards. These definitions differ from the definitions in subpart 1300 of Regulation S K (“Subpart 1300”), which replaced the United States Securities and Exchange Commission (“SEC”) Industry Guide 7 as of January 1, 2021. While the definitions in Subpart 1300 are more similar to the definitions in NI 43 101 and the CIM Definition Standard than were the Industry Guide 7 provisions, investors should not assume that any part or all of the mineralization in these categories will ever be converted into a higher category of mineral resources or into mineral reserves. Mineralization described using these terms has a greater amount of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, investors are cautioned not to assume that any measured mineral resources, indicated mineral resources, or inferred mineral resources that the Company reports are or will be economically or legally mineable. Further, “inferred mineral resources” have a greater amount of uncertainty as to their existence and as to whether they can be mined legally or economically. Therefore, U.S. investors are also cautioned not to assume that all or any part of the “inferred mineral resources” exist. Under Canadian securities laws, estimates of “inferred mineral resources” may not form the basis of feasibility or pre feasibility studies, except in rare cases. As a foreign private issuer that files its annual report on Form 40 F with the SEC pursuant to the multi jurisdictional disclosure system, the Company is not permitted to provide disclosure on its mineral properties under the Subpart 1300 provisions and will continue to provide disclosure under NI 43 101 and the CIM Definition Standards. If the Company ceases to be a foreign private issuer or loses its eligibility to file its annual report on Form 40 F pursuant to the multi jurisdictional disclosure system, then the Company will be subject to reporting pursuant to the Subpart 1300 provisions, which may be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

(4) The Company's mineral resource and mineral reserve estimates were prepared under the supervision of and verified by Mr. John Sims, who is a qualified person as defined by NI 43-101. Mr. Sims was an officer of Kinross until December 31, 2020. Mr. Sims remains the Company's qualified person as an external consultant.

(5) The Company's normal data verification procedures have been used in collecting, compiling, interpreting and processing the data used to estimate mineral reserves and mineral resources. Independent data verification has not been performed.

(6) Rounding of values to the 000s may result in apparent discrepancies.

(7) Mineral resources are exclusive of mineral reserves.

(8) Mineral resources that are not mineral reserves do not have to demonstrate economic viability. Mineral resources are subject to infill drilling, permitting, mine planning, mining dilution and recovery losses, among other things, to be converted into mineral reserves. Due to the uncertainty associated with inferred mineral resources, it cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to indicated or measured mineral resources, including as a result of continued exploration.
