January 22, 2015

KINROSS GOLD CORPORATION
CIBC Institutional Investor Conference
CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

All statements, other than statements of historical fact, contained or incorporated by reference in or made in giving this presentation and responses to questions, including but not limited to any information as to the future performance of Kinross, constitute “forward looking statements” within the meaning of applicable securities laws, including the provisions of the Securities Act (Ontario) and the provisions for “safe harbour” under the United States Private Securities Litigation Reform Act of 1995 and are based on expectations, estimates and projections as of the date of this presentation. Forward-looking statements contained in this presentation include those under the headings “Kinross Value Proposition”, “Operational Excellence - 2014E Guidance Update”, “Strong Financial Discipline”, “Attractive Growth Opportunities”, “Growth Opportunities – Tasiast, Mauritania”, “Growth Opportunities – La Coipa, Chile”, “High-Quality Exploration Targets”, and “Compelling Valuation”, and include without limitation, statements with respect to: our guidance for production, production costs of sales, all-in sustaining cost and capital expenditures, expected savings pursuant to our cost review and reduction initiatives, including the continuation of the Way Forward, modifications to projects and operations and our exploration results and budget, including the Tasiast expansion project and our expectations regarding timelines for continued development, as well as references to other possible events include, without limitation, possible events; opportunities; statements with respect to possible events or opportunities; estimates and the realization of such estimates; future development, mining activities, production and growth, including but not limited to cost and timing; success of exploration or development of operations; the future price of gold and silver; currency fluctuations; expected capital expenditures and requirements for additional capital; government regulation of mining operations and exploration; environmental risks; unanticipated reclamation expenses; and title disputes. The words “2014E”, “2015E”, “aim”, “anticipates”, “believes”, “confident”, “consider”, “efforts”, “encouraging”, “estimate”, “expects”, “explore”, “forecasts”, “focus”, “goal”, “guidance”, “initiative”, “indicate”, “objective”, “opportunity”, “options”, “outlook”, “on track”, “potential”, “plan”, “priorities”, “progress”, “prospects”, “promising”, “pursue”, “study”, “target”, “thinks”, or “way forward”, or variations of such words and phrases or statements that certain actions, events or results may, can, could, would, should, might, indicates, will be achieved, occur, offer or be taken, and similar expressions identify forward looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Kinross as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Statements representing management’s financial and other outlook have been prepared solely for purposes of expressing their current views regarding the Company’s financial and other outlook and may not be appropriate for any other purpose. Many of these uncertainties and contingencies can affect, and could cause, Kinross’ actual results to differ materially from those expressed or implied in any forward looking statements made by, or on behalf of, Kinross. There can be no assurance that forward looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. All of the forward looking statements made in this presentation are qualified by these cautionary statements, and those made in our filings with the securities regulators of Canada and the U.S., including but not limited to those cautionary statements made in the “Risk Factors” section of our most recently filed Annual Information Form, the “Risk Analysis” section of our Q3 2014 and FYE 2013 Management’s Discussion and Analysis, and the “Cautionary Statement on Forward-Looking Information” in our news release dated November 5, 2014, to which readers are referred and which are incorporated by reference in this presentation, all of which qualify any and all forward-looking statements made in this presentation. These factors are not intended to represent a complete list of the factors that could affect Kinross. Kinross disclaims any intention or obligation to update or revise any forward-looking statements or to explain any material difference between subsequent actual events and such forward-looking statements, except to the extent required by applicable law.

Other information

Where we say “we”, “us”, “our”, the “Company”, or “Kinross” in this presentation, we mean Kinross Gold Corporation and/or one or more or all of its subsidiaries, as may be applicable. The technical information about the Company’s mineral properties contained in this presentation has been prepared under the supervision of and verified by Mr. John Sims, an officer of the Company who is a “qualified person” within the meaning of National Instrument 43-101.
KINROSS VALUE PROPOSITION

EXEMPLARY OPERATIONAL TRACK RECORD

• 9 consecutive quarters of strong results

STRONG BALANCE SHEET

• $2.4B in liquidity and conservative net debt of $1.2B
• No significant debt maturities until 2016

ATTRACTIVE GROWTH OPPORTUNITIES

• Potential Tasiast mill expansion expected to produce approximately 850k oz at ~$500/oz (avg. first five years)\(^{(1)}\)
• Initiated a pre-feasibility study at La Coipa

COMPELLING VALUATION

• Attractive value opportunity relative to peers, considering annual production, cost structure, track record and relatively low-risk growth opportunities

\(^{(1)}\) Refer to endnote #1.
DELIVERING OPERATIONAL EXCELLENCE
Over 50% of estimated 2014 gold equivalent production from mines located in the Americas

2014E GOLD EQUIVALENT PRODUCTION\(^{(2,3)}\)

- Americas: 28%
- West Africa: 53%
- Russia: 19%

2.6-2.7M ounces
OPERATIONAL EXCELLENCE

STRONG OPERATING PERFORMANCE

Continuing track record of consistent and dependable operational performance

• Produced 2.0M gold equivalent ounces YTD Q3 2014

• Expect to be at the **HIGH-END** of revised production guidance of 2.6-2.7M gold equivalent ounces⁽³⁾

(3) Refer to endnote #3.
OPERATIONAL EXCELLENCE

FOCUSING ON COSTS

Achieved significant year-over-year reductions in all-in sustaining cost

- All-in sustaining cost(4) of $963 per gold equivalent ounce YTD Q3 2014

- LOWERED 2014 all-in sustaining cost guidance to $950 to $990 per gold equivalent ounce(3)

(3) Refer to endnote #3.
(4) Refer to endnote #4.
AMERICAS

• Five mines located in the US, Brazil and Chile
• 2014E regional guidance: 1,330 – 1,430k oz. at $780-840/oz.(3)

(3) Refer to endnote #3.
Region tracking high-end of 2014 production guidance with costs expected in low-end of range

- Record quarterly production at Paracatu resulting from continuous improvements initiatives
- Record quarterly production at Maricunga driven by on-going operational improvements
- Round Mountain mill expected to re-commission in March 2015 following repairs due to fire
  - Heap leach (~75% of Round Mountain’s production) continues uninterrupted

### AMERICAS OPERATING RESULTS\(^{(5)}\)

<td>$752</td>
<td>$806</td>
</tr>
</tbody>
</table>

(5) Refer to endnote #5. Production cost of sales ($/oz.) includes residual ounces sold from La Coipa, which suspended operations in 2013.
RUSSIA

• Two high-grade underground mines serviced by one mill
• 2014E regional guidance: 710-750k oz. at $520-550/oz. (3)

(3) Refer to endnote #3.
OPERATIONAL EXCELLENCE
RUSSIA OPERATIONS

Kupol & Dvoinoye operations continue to be unaffected by events in Ukraine

- Continued strong performance resulted in an increase to 2014E regional production guidance

- Kinross maintains an open dialogue with both Canadian & Russian governments

- Russian government continues to be supportive of foreign investors

(5) Refer to endnote #5.
WEST AFRICA

• Strong focus on optimizing efficiency and performance
• 2014E regional guidance: 480 – 540k oz. at $790 – $830/oz.\(^{(3)}\)

\(^{(3)}\) Refer to endnote #3.
OPERATIONAL EXCELLENCE
WEST AFRICA OPERATIONS

Cost of sales per ounce in the first nine months declined 10% compared with 2013

- Lower regional cost of sales driven by:
  - Transition to self-perform mining at Chirano reduced costs in Q3 by 29% year-over-year
  - Continuous improvement efforts at Tasiast

STRONG FINANCIAL DISCIPLINE
STRONG BALANCE SHEET
SOLID FINANCIAL POSITION

Balance sheet strength continues to be a priority objective

STRONG LIQUIDITY POSITION

MAINTAINING FINANCIAL FLEXIBILITY

- Improved balance sheet during the first 9 months of 2014:
  - Repaid $60M of debt
  - Increased cash position by $100M
  - Reduced net debt: $1.2B as at September 30
- Only material debt maturities prior to 2018 is $250M senior notes due in 2016 and Kupol loan payments
- Investment grade credit ratings
  - Ratings reaffirmed by both Standard & Poors and Fitch in October

$2.4B
$1.5
$0.9

AS AT SEPTEMBER 30

Cash, cash equivalents and restricted cash
Undrawn credit facilities
STRONG BALANCE SHEET

FINANCIAL FLEXIBILITY

No material debt maturities prior to 2016

SCHEDULED DEBT REPAYMENTS

(i) Consists of $250 million principal amount of 3.625% senior notes due 2016, $500 million principal amount of 5.125% senior notes due 2021, $500 million principal amount of 5.95% senior notes due 2024 and $250 million principal amount of 6.875% senior notes due 2041.
DISCIPLINED CAPITAL ALLOCATION
REDUCING CAPITAL SPENDING

• Trend of declining capital expenditures since 2012

• **LOWERED** 2014 guidance to $630 - $650M from $675M$^{(3)}$}

(3) Refer to endnote #3.
ATTRACTIVE GROWTH OPPORTUNITIES
GROWTH OPPORTUNITIES

TASIAST, MAURITANIA

• Existing mine with an 8,000 tpd mill originally designed to process ore from a series of small open pits

• Identified 38,000 tpd as optimal throughput for the larger, 15 million ounce orebody
GROWTH OPPORTUNITIES – TASIAST, MAURITANIA

FEASIBILITY STUDY ESTIMATES

Mill expansion has the potential to transform Tasiast into Kinross’ largest mine with costs among the lowest in the portfolio

<table>

</tr>
</tbody>
</table>

KEY ASSUMPTIONS:
- 38 ktpd CIL mill utilizing heavy fuel oil for power generation
- Gold price assumption: $1,350/oz. (economic evaluation); $1,200 (mineral reserves)
- Estimates based on an expected 9.0 million recoverable ounces
- Discount rate: 5%
- Feasibility study results do not include potential exploration upside

(6) Refer to endnote #6. (7) Refer to endnote #7. (8) Refer to endnote #8. (9) Refer to endnote #9.
MAINTAINING BALANCE SHEET STRENGTH
OVERRIDING FACTOR IN INVESTMENT DECISION

Other considerations include:

• Financing plan: expect to fund the project through a combination of project financing, existing cash and operating cash flow
  ▪ Project financing discussions continue with potential multi-lateral lenders
  ▪ Considering funding in the range of $700-$750M of the expected $1.6B initial capital expenditure

• Gold price outlook and impact on cash flow generation are important factors in making a decision

(5) Refer to endnote #5.
Encouraging exploration results along Tasiast’s prospective 80 km trend
GROWTH OPPORTUNITIES - CHILE

LA COIPA PHASE 7

Initiated a pre-feasibility study at La Coipa Phase 7 in Chile

- Expected to be completed during Q3 2015

- The pre-feasibility study will focus on:
  - The Pompeya deposit, where drilling has outlined higher average grades than previously processed at La Coipa;
  - Current oxide/transition mineral resources at the existing Puren deposit

- Also conducting a scoping study to focus on processing options for known near-surface sulfide mineralization in the district

- On-going exploration work to define other future opportunities

Note: The Pompeya deposit is located 3 km northeast of the La Coipa mill and is part of the CMLC JV property (75% Kinross)
HIGH-QUALITY EXPLORATION TARGETS

KUPOL – MOROSHKA, RUSSIA

• Moroshka located 4 km east of the Kupol mine

• Drilling confirmed continuity of high grades along a 400 strike metre vein structure

CURRENT PRELIMINARY ESTIMATE

• Moroshka contains a minimum total potential mineral resource of 0.4 to 0.6 million tonnes grade 11.9 to 19.7 g/t gold equivalent(i)

• Developing a mineral resource block model incorporating new information from last year’s infill drilling

• Undertaking geometallurgical testing of the mineralized zone

(i) These potential estimates are conceptual in nature, as further exploration is required to define a mineral resource and it is uncertain if such additional exploration will define a mineral resource.
Encouraging results from initial exploration work on September trend, located approximately 15 km northwest of Dvoinoye
HIGH-QUALITY EXPLORATION TARGETS

CHIRANO, GHANA

• Drilling program designed to test underground potential of mineralization beneath Suraw, Akoti and Tano open pits
• Results confirmed mineralization extends 100 to 400 metres below bottom of each pit
• Remains open at depth at all three deposits

For additional information, please see Kinross’ news release dated February 12, 2014 and figure 11 of Appendix A, which are available on our website at www.kinross.com.

Source: Bloomberg – January 19, 2015; Company reports

(1) Mid-point of company guidance for 2014 gold production rounded to 1 decimal point. Figures for Kinross represents attributable gold ounces sold; Yamana represents gold equivalent ounces; Newmont attributable production.
Attractive value opportunity relative to peers, considering Kinross’ annual production, cost structure, track record and growth opportunities.
Among the world’s few cold climate heap leach facilities

- Achieved record annual production in 2013, Fort Knox’s 16th year in operation
- Impressive track record of operational excellence

EXPLANATORY NOTES: EXPLORATION

Tasiast Exploration Results

Hole identifiers ending with suffix DD are diamond drill core holes (HQ diameter) and those ending with suffix RC are reverse circulation (RC) holes. Holes with “A” prefixing DD or RC are diamond core or reverse circulation re-drills of the original hole where significant deviation would have resulted in that hole missing the intended target.

Results provided for Piment Central include all exploration drill holes for which assay results were available at the time of preparation of this news release. Composite assay intervals reported for exploration drilling at Tasiast are calculated by taking a weighted average of all gold fire assay values equal to or above 0.5 g/t gold. No more than three consecutive metres of internal waste (<0.5 g/t gold) are accepted and high grade samples are cut to 20 grams per tonne gold. All assay intervals are reported as down-hole widths. True widths are estimated to be on average greater than 90% of the drilled intercept.

Composite intervals for reconnaissance reverse circulation holes are calculated by applying a 0.3 gram per tonne cut-off, no more than 6 metres of internal waste and no top cut. All assay intervals are reported as down-hole thicknesses. There is insufficient information on all targets to provide estimates of true thickness.

The reader is referred to the Tasiast NI 43-101 Technical Report dated March 30, 2012, available under the Company’s profile at www.sedar.com, for a full description of drilling methods, sampling procedures and QA/QC protocols. Samples from Tasiast are prepared and analyzed by fire assay using a 50 gram charge with an AAS finish at ALS (Tasiast mine site, Johannesburg, South Africa and Vancouver, Canada) in compliance with industry standards. Field duplicate samples are taken and blanks and standards are added to every batch submitted. Selected samples from this lab are check assayed each month at other ALS and third party commercial laboratories worldwide.

The technical information about the Company’s drilling and exploration activities at Tasiast contained in this news release has been prepared under the supervision of Dr. Glen Masterman, an officer with the Company who is a “qualified person” within the meaning of National Instrument 43-101. The drill hole data base including collar, survey, geology and assay information were reviewed by the “qualified person” and the composite assay information independently calculated and verified for accuracy of reporting. Assay certificates for the information disclosed in this news release were verified by the site Chief Geologist but not by Dr. Masterman as the “qualified person”.
EXPLANATORY NOTES: EXPLORATION

Kupol and Dvoinoye Exploration Results

All drill holes at Moroshka are diamond drill core holes (HQ or NQ core diameter). The Moroshka vein dips sub-vertically to the east. Drill holes are angled between minus 50° and 75° to the east and west.

Results provided for Moroshka include all exploration drill holes dating back to 2009 and for which assay results were available at the time of preparation of this news release. The composite intervals reported for Moroshka diamond drill core are selected mainly by geological parameters but some of intervals are included taking in account the elevated Au and Ag values of the assay data. The intervals are calculated by taking a weighted average of all gold and silver fire assay values included. No more than three consecutive metres of internal waste (<1 grams per ton) is accepted. High grade samples are not excluded from the calculation. All composite assay intervals are reported as down-hole widths and are not considered true thickness. True widths are estimated to be on average greater than 70% of the drilled intercept at Moroshka.

Abbreviations used are:

- NSI - No Significant Intersection;
- BDL - Below Detection Limit;
- NCV - Not Correlated Veins;
- West veins - Western Parallel Veins.

Results are reported for 70 diamond drill core holes and 33 trenches completed at the September Northeast (NE) deposit.

Composite assay intervals reported for September NE diamond drill core results are calculated by taking a weighted average of all gold fire assay values equal to or above 2.0 gram per tonne gold. No more than three consecutive metres of internal waste (<2.0 grams per tonne) is accepted, high grade samples are not cut. True widths are estimated to be on average greater than 80% of the drilled intercept. NSI means “no significant intercept”.

The reader is referred to the Kupol NI 43-101 Technical Report dated May 9, 2011, available under the Company’s profile at www.sedar.com, for a full description of drilling methods, sampling procedures and QA/QC protocols. Samples from Moroshka and September NE are prepared and analyzed by fire assay using a 50 gram charge with a gravimetric finish at the Kupol mine site analytical laboratory in compliance with industry standards. Field duplicate samples are taken and blanks and standards are added to every batch submitted.

The technical information about the Company’s drilling and exploration activities at Kupol contained in this news release has been prepared under the supervision of Dr. Glen Masterman, an officer with the Company who is a “qualified person” within the meaning of National Instrument 43-101. The drill hole data base including collar, survey, geology and assay information were reviewed by the “qualified person” and the composite assay information independently calculated and verified for accuracy of reporting. Assay certificates for the information disclosed in this news release were verified by the site Chief Geologist but not by Dr. Masterman as the “qualified person”. 

KINROSS

ENDNOTES

1) For more information regarding the results of the Tasiast feasibility study, please refer to the news release dated March 31, 2014, as well as the Tasiast technical report filed March 31, 2014, both of which are available on our website at www.kinross.com.

2) Unless otherwise noted, gold equivalent production, gold equivalent ounces sold and production cost of sales figures in this presentation are based on Kinross' 90% share of Chirano production.

3) For more information regarding Kinross’ production, cost and capital expenditures outlook for 2014, please refer to the news releases dated February 12, 2014 and November 5, 2014, both available on our website at www.kinross.com. Kinross’ outlook for 2014 represents forward-looking information and users are cautioned that actual results may vary. Please refer to the risks and assumptions contained in the Cautionary Statement on Forward-Looking Information on slide 2 of this presentation.

4) All-in sustaining cost is a non-GAAP measure. For more information and a reconciliation of this non-GAAP measure for the three and nine months ended September 30, 2014 and 2013, please refer to the news release dated November 5, 2014, under the heading “Reconciliation of non-GAAP financial measures”, available on our website at www.kinross.com.

5) Attributable production cost of sales per gold equivalent ounce sold is a non-GAAP measure. For more information and a reconciliation of this non-GAAP measure for the three and nine months ended September 30, 2014 and 2013, please refer to the news release dated November 5, 2014, under the heading “Reconciliation of non-GAAP financial measures”, available on our website at www.kinross.com.

6) Cash costs include estimated operating costs and royalties.

7) All-in cost include operating costs, royalties, sustaining capital, and capitalized stripping, and does not include an estimated initial capital expenditure of $1.6 billion, any exploration, income taxes, non-cash items related to reclamation or allocation of regional or corporate overhead costs.

8) Estimated initial capital expenditure includes a 14.1% contingency.

9) Estimates for IRR and NPV do not include potential for improved economics related to potential district exploration upside, potential implementation of lower-cost natural gas generated power or additional known mineral resources estimated using a gold price assumption above $1,200 per ounce.

10) For more information regarding our mineral reserve and mineral resource estimates as of December 31, 2013 (including as updated for Tasiast in March 2014), please refer to our news releases dated February 12 and March 31, 2014, as well as our 2013 Annual Information Form and the Tasiast technical report, both filed March 31, 2014, all of which are available on our website at www.kinross.com.
