

Company Focuses on Service Reliability, Affordability

It is Dominion Energy's mission to provide reliable and affordable — and increasingly sustainable — energy safely to 7 million customers.

While fuel costs are increasing for power stations, and the price of natural gas is going up for our gas utilities, your company is using all available resources at its disposal to keep rates down and aid reliability. Even in a period of increasing fuel costs, residential rates for Dominion Energy's electric utilities are expected to remain below the national average.

In Virginia, the company now offers more than 40 energy efficiency programs for all types of customers, up from fewer than 10 just five years ago. In the meantime, the average time Dominion Energy Virginia customers lose power is down about 11% over the past three years, in part because of programs aimed at preventing outages and communicating and restoring them when they occur.

For the company's gas utilities, better communication through 811 along with innovative programs using data to track higher-risk contractors have reduced third-party damage to gas distribution infrastructure 24% since April 2019. And energy efficiency offerings are on the rise, including a dramatic increase in North Carolina and an introduction of such programs into South Carolina.

Dominion to Sell W.Va. Gas Utility

In order to focus on larger, core state-regulated gas and electric utilities, Dominion Energy has announced plans to sell its gas distribution company in West Virginia to an infrastructure fund managed by Ullico, Inc. The sale of the utility, which serves more than 100,000 customers and is headquartered in Clarksburg, is expected to be completed by year-end 2022.

The company continues to believe in the long-term viability of its remaining gas utilities that serve nearly 3.5 million customers across six states. McKinsey & Company recently issued a study showing how gas utilities can facilitate a decarbonized energy system.

Keep in Touch – Don't Lose Your Stock!

Unclaimed property — sometimes called abandoned property — refers to accounts in financial institutions and companies that have had no activity generated or contact for a period of a year or longer.

Acting in the best interests of consumers, each state has enacted an unclaimed property statute that protects your funds from reverting to the company should contact be lost. These laws instruct companies to turn forgotten funds over to a state official who makes a diligent effort to find you or your heirs. Most states hold lost funds until you are found, returning them to you at no cost or for a nominal handling fee upon filing a claim form and verification of your identity.

Because it is impossible to store and maintain all of the contents that are turned over from safe-deposit boxes, most states hold periodic auctions and hold the funds obtained from the sale of the items for the owner. Some states also sell stocks and bonds and return the proceeds to the owner in the same manner.

Your Company Is Committed ...

To Project Plant It!

For 16 years, your company has provided more than 800,000 planting materials to students across its footprint.

This year, 51,000 students at elementary, middle, and high schools, and children in YMCAs, Scout troops, and more participated in the program coinciding with tree-planting holiday, Arbor Day. They received redbud tree seedlings and packets of wildflower seeds that attract bees and other pollinators such as hummingbirds, butterflies, and bats.

More information, including STEM-focused lesson plans, games, reading lists, and other instructional materials may be found at projectplantit.com.

To Educational Opportunities

Building on its HBCU Promise program that supports endowments, capital projects, operating expenses, and educational programs in clean energy at several historically Black colleges and universities in the states where the company operates, Dominion Energy has launched its three-year, \$2 million Building Hispanic Talent Initiative.

In partnership with The Hispanic Association of Colleges and Universities, the initiative provides funding to seven institutions of higher learning. The schools — located in Virginia, North Carolina, Connecticut, Utah, and Puerto Rico — will customize seven-week “Summer Bridge” programs for Hispanic high school students who will take college-level courses and earn college-level credits in such subjects as engineering, business, cybertechnology, and biotechnology.

This newsletter contains forward-looking statements that are subject to various risks and uncertainties. Discussion of factors that could cause actual results to differ materially from management's projections, forecasts and estimates are detailed in the company's most recent Securities and Exchange Commission filings on Forms 10-Q and 10-K.
