

Company Outlines Long-Term Clean Energy Investment Plan

Over the next 15 years, your company could spend as much as \$72 billion on clean energy and clean energy-enabling infrastructure — \$26 billion of that total over the next five years.

This includes investing in renewable generation such as solar and offshore wind, storage, nuclear license extensions, renewable natural gas and upgrades to the electrical grid and gas distribution system.

The company's long-term plans were announced during its fourth-quarter earnings call on February 12 by then-Executive Chairman Thomas F. Farrell, II. Farrell succumbed to cancer on April 2. His commitment to safe, clean, reliable and affordable energy lives on with the company's new chair, president and chief executive officer, Robert M. Blue, the Board of Directors and his leadership team.

Said Blue, "Tom set the strategy of aggressive clean energy deployment and net zero emissions by 2050. We are executing that strategy for the benefit of all of our stakeholders — from our employees and shareholders to the customers and communities we serve."

Surry Receives Federal Permit

In May, the federal Nuclear Regulatory Commission announced that it had approved a permit extending the life of Surry's two nuclear reactors in Surry County, Va., past 2050.

Surry provides clean, around-the-clock electricity to 419,000 homes. Extending the life of this carbon-free workhorse an additional 20 years will help the company meet its environmental commitments while allowing time to pursue new clean energy technologies to serve customers.

The company expects to spend up to \$4 billion to retrofit Surry and North Anna, which is also being considered for license extension, to operate longer — safely and efficiently.

Keep in Touch – Don't Lose Your Stock!

Unclaimed property – sometimes called abandoned property – refers to accounts in financial institutions and companies that have had no activity or contact for a period of a year or longer.

Acting in the best interests of consumers, each state has enacted an unclaimed property statute that protects your funds from reverting to the company should contact be lost. These laws instruct companies to turn forgotten funds over to a state official who

makes a diligent effort to find you or your heirs. Most states hold lost funds until you are found, returning them to you at no cost or for a nominal handling fee upon filing a claim form and verification of your identity.

Because it is impossible to store and maintain all of the contents that are turned over from safe-deposit boxes, most states hold periodic auctions and hold the funds obtained from the sale of the items for the owner. Some states also sell stocks and bonds and return the proceeds to the owner in the same manner.

Your Company Is Committed ...

To Environmental Education

This year marked the 15th implementation of Dominion Energy's signature Project Plant It! program, which coincides each year with Arbor Day and teaches students the value of environmental stewardship.

This year, 51,000 students in 15 states participated, receiving tree seedlings and wildflower seeds that will serve as pollinators. Since 2007, the company has distributed more than 730,000 planting materials.

Jaraun Dennis, chief technology officer and facilities director for Wyoming's Uinta County School District, said that "students will have a very special connection with nature by caring for their tree and watching their wildflowers attract bees," adding, "Project Plant It! really brings science to life."

To Rural Broadband Access

With millions of Americans continuing to work and learn remotely, the digital divide has never been clearer.

Dominion Energy is working with electric cooperatives and Internet service providers to promote access for unserved and underserved communities.

In April, for example, the company announced a partnership with All Points Broadband and the Pamunkey Indian Tribe whereby fiber-to-the-home broadband access would be delivered to the Pamunkey Indian Reservation in Virginia's King William County.

The company's other partnerships provide middle-mile infrastructure to eight Virginia localities, including King William.

This newsletter contains forward-looking statements that are subject to various risks and uncertainties. Discussion of factors that could cause actual results to differ materially from management's projections, forecasts and estimates are detailed in the company's most recent Securities and Exchange Commission filings on Forms 10-Q and 10-K.
