ARC Document Solutions®

ARC Achieves ISO Certification For Company, Cloud Apps, And MPS

5/21/2018

WALNUT CREEK, Calif., May 21, 2018 /PRNewswire/ -- ARC Document Solutions, Inc. (NYSE: ARC), a leading document solutions provider to design, engineering, construction, and facilities management professionals, today announced the achievement of ISO/IEC 27001:2013 certification for the company, its managed print services procedures, and its cloud platform, SKYSITE.

The certification signifies compliance with international best practices, and a commitment to a repeatable, continuously improving, risk-based information security management system. Far more than simple permissions and access controls, such a system extends past online security and includes security protocols for people, processes, and IT systems.

"For us, the ISO 27001 certification represents an external validation of a belief we have always held," said Rahul Roy, Chief Technology Officer for ARC. "Your data is private, your data security matters, your data is yours, and it should be protected. This has been a constant theme for our development and network teams since ARC began developing information management platforms in 2000. While it was no surprise to us that our systems were found to be robust, and were certified relatively quickly, the certification provides comfort and confidence for our customers and partners."

ARC'S certification covers information, management, and processing facilities hosted on Amazon Web Services (AWS), and the design, development, implementation, and operation of the systems, applications, databases, and networks inside ARC. The company's certifying body is Otabu Certification Limited (UK).
