

International Truck And IC Bus Showcase Advanced Technologies At Green Transportation Summit & Expo

April 18, 2018

IC Bus Hosts Ride and Drive with Concept Electric School Bus chargeE™ at Pacific Raceways

TACOMA, Wash., April 18, 2018 /PRNewswire/ -- International Truck and IC Bus are showcasing the industry's only fully integrated electric school bus, the chargeE™, at this year's Green Transportation Summit & Expo (GTSE). Additionally, IC Bus will host a ride and drive with chargeE for conference attendees at the Pacific Raceways in Kent, Wash., on Thursday, April 19, from 12:00 to 5:00 p.m. PDT.

As a presenting sponsor, International Truck and IC Bus are laying out a clear vision of why the school bus and medium-duty truck segments are a natural fit to bring electrification to the commercial vehicle market.

"As the U.S. thinks about cleaner commercial transportation moving forward, electrification is a big piece of the puzzle, and school buses, along with medium-duty vehicles, are the logical starting point," said Trish Reed, vice president and general manager, IC Bus. "These vehicles travel shorter distances and typically return to their base overnight, making the charging infrastructure less complex. And more significantly, they will provide immediate environmental benefits, especially in urban areas."

The chargeE is a purpose-built, fully integrated electric Type C school bus from one of the industry's most trusted Original Equipment Manufacturers (OEMs), IC Bus. This concept school bus incorporates a common group electric drivetrain from alliance partner Volkswagen Truck & Bus that is quiet, does not produce any emissions, and can be built to address any school bus customer's specific requirements.

The range of the chargeE can exceed 120 miles, while the powertrain can deliver up to 260 kW (about 349 peak horsepower). It also includes connected systems and remote diagnostics that support vehicle safety, uptime and more efficient vehicle inspections. The chargeE also features an exclusive, purpose-built camera solution, the IC Bus Full View Camera Technology™ by Rosco, that makes the driver's job easier and safer.

"In addition to just building the vehicle, OEMs need to expand beyond their traditional role and assist school districts and other stakeholders in pulling together all the elements of a total electric transportation solution," Reed said. "We believe OEMs should partner with customers, local utilities, and government officials to develop solutions that address charging infrastructure, creative vehicle-to-grid concepts, and government grants and incentives."

Navistar and Volkswagen Truck & Bus announced their electric school bus initiative at the inaugural North American Commercial Vehicle Show in Atlanta this past September, when they also announced plans to develop an electric-powered, medium-duty vehicle for Navistar's Core (U.S. and Canada) market that is expected to launch in late 2019 or 2020.

IC Bus recently kicked off a [national tour with chargeE](#) which includes scheduled stops at trade shows, school visits, and local government events throughout the country; GTSE is the fifth major stop.

To learn more about the chargeE and many additional innovations from IC Bus and International Truck, visit block 311-410 on the 2018 GTSE Show Floor at the Greater Tacoma Convention Center, an IC Bus or International Truck dealer or online at www.icbus.com/electricbustour.
